The sections on non-circular pipe and partially full pipes and sewer flow are omitted. It is an inverse measure, because the greater the tolerance, the lesser the vulnerability. The biggest possible rate of improvement is indicated by the biggest difference between the evaluation sum and the cost coefficient. DualObelisks The analysis may be done graphically or, if a number of solutions of similar systems are envisaged, a computer program could be developed. The prevention of vortices in intakes.

The average value of the coefficient for turbulent flow is 1. A diagram of the corresponding water supply network is shown in Figure 3.
