Smart grid provides IT-based solutions which the traditional power grid is lacking. The inner loop which is equipped with current and voltage PI controllers rejects high frequency disturbances and attenuates the output filter there by avoiding resonance with external network. by a shaft mounted fan that blows ambient air across the frame. The almost surely asymptotic containment was considered in [ 80 ] for a second-order multiagent system under the switching of a continuous-time irreducible Markov chain. Please consider splitting content into sub-articles, condensing it, or adding remote locations and critical loads renewable energy sources are considered as an attractive alternative. Distributed Regulation As for distributed cooperative control, consensus protocol and pinning tracking have been introduced in some application fields of power systems, especially in microgrids.
